## ASSIGNMENT 3 - ROUTING PROTOCOLS

8<sup>th</sup> January 2021

Name	ID
Yomna Gamal El-Din Mahmoud	63

### 1. Download NS3, build it and run the hello world example

Because of this issue :

E: Unable to locate package python-pygoocanvas

E: Unable to locate package libgoocanvas-dev

I found it here: <https://itectec.com/ubuntu/ubuntu-unable-to-locate-package-python-pygoocanvas/>

The solution was to use an ns -3 version above 29 because I had Ubuntu above 18 so I used version 31.

Tests: →

Hello Simulation:

```

Hello Simulator
xmagneto@Inspiron: ~/Desktop/ns-allinone-3.31/ns-3.31$
```

## 2. NS3 source code updated.

The updated part for adding only one route with minimum cost is to remove this part “Make it a comment” and add continue to be as the previous condition of routes not has lower cost. In “global-route-manager-impl.cc” file

```
        else if (cw->GetDistanceFromRoot () == distance)
        {
//
// This path is one with an equal cost.
//
            NS_LOG_LOGIC ("Equal cost multiple paths found.");

// At this point, there are two instances 'w' and 'cw' of the
// same vertex, the vertex that is currently being considered
// for adding into the shortest path tree. 'w' is the instance
// as seen from the root via vertex 'v', and 'cw' is the instance
// as seen from the root via some other vertices other than 'v'.
// These two instances are being merged in the following code.
// In particular, the parent nodes, the next hops, and the root's
// output interfaces of the two instances are being merged.
//
// Note that this is functionally equivalent to calling
// ospf_nexthop_merge (cw->nexthop, w->nexthop) in quagga-0.98.6
// (ospf_spf.c::859), although the detail implementation
// is very different from quagga (blame ns3::GlobalRouteManagerImpl)

// prepare vertex w
        w = new SPFVertex (w_Isa);
        SPFNexthopCalculation (v, w, l, distance);
        cw->MergeRootExitDirections (w);
        cw->MergeParent (w);
// SPFVertexAddParent (w) is necessary as the destructor of
// SPFVertex checks if the vertex and its parent is linked
// bidirectionally
        SPFVertexAddParent (w);
        delete w;
        continue;
    }
}
```

## 3. A description of the contribution introduced to code.

```
#include <iostream>
#include <fstream>
#include <string>
#include <cassert>
#include "ns3/core-module.h"
#include "ns3/network-module.h"
#include "ns3/csma-module.h"
#include "ns3/internet-module.h"
#include "ns3/point-to-point-module.h"
#include "ns3/applications-module.h"
```

```

#include "ns3/ipv4-global-routing-helper.h"
#include "ns3/netanim-module.h"

using namespace ns3;

NS_LOG_COMPONENT_DEFINE ("Assignment3");
